### **October 2013 NPL Proposal of Delta Shipyard Site (Tentative)**

EPA Region asked the Louisiana Department of Environmental Quality (LDEQ) for a letter of concurrence from Governor Jindal by August 1, 2013 in support of the proposal of the Delta Shipyard site in Houma, LA, to the National Priorities List (NPL). A letter of support was not received by August 1, 2013; however LDEQ is continuing to work through their processes and anticipate that a letter will be received. Depending when the letter is received the site proposal may be either as part of the October 2013 or April 2014 NPL rulemaking. The former Delta Shipyard (Site) is located at 200 Dean Court in southeastern Houma, Terrebonne Parish, Louisiana. The facility was a cleaning and repair facility for small cargo boats, fishing boats and oil barges. Located in a mixed industrial/residential area south of the city, the site is not fenced, and there is not any site security to limit public access to the site. Without remediation of the site, additional releases to ground water, surface water and soil will continue to occur. The site was referred to EPA in 2012 from the Louisiana Department of Environmental Quality. Region 6 will echo the HQ Press announcement.

### **October 2013 NPL Proposal of the Macmillan Ring Free Oil Site (Norphlet Chemical Site)**

EPA Region asked the Arkansas Department of Environmental Quality (LDEQ) for a letter of concurrence from Governor Bebe by August 1, 2013 in support of the proposal of the Macmillan Ring Free Oil Site, to the National Priorities List (NPL). A letter of support was received on July 29, 2013. The MacMillan Ring Free Oil site is scheduled to be proposed as

part of the October 2013 NPL rulemaking. The facility is bordered by a residential subdivision and the Norphlet Public School on the west, Hayes Creek on the north and east, and Massey Creek and bottomlands associated with the creek to the southwest. There are documented releases to both surface water and ground water. Sampling conducted by the EPA and ADEQ indicate that there may be as much as a foot of petroleum product underlying the facility. Without remediation of the site, additional releases to ground water, surface water and soil will continue to occur. The site was referred to EPA in 2011 from the Arkansas Department of Environmental Quality. Region 6 will echo the HQ Press announcement.

**Subject:** NPL entries in Administrator's Report

Brenda –

These two entries are in the draft Administrator's Report which will be finalized tomorrow (Friday). Can you confirm they are accurate or correct them?

### **Proposal of Delta Shipyard Site to the NPL Listing**

**[NOTE: Has this happened?]** On August 1, EPA is scheduled to issue a letter to LA Governor Jindal proposing that the Delta Shipyard site in Houma, LA, be added to the National Priorities List (NPL). The former Delta Shipyard (Site) is located at 200 Dean Court in southeastern Houma, Terrebonne Parish, Louisiana. The facility was a cleaning and repair facility for small cargo boats, fishing boats and oil barges. Located in a mixed industrial/residential area south of the city, the site is not fenced, and there is not any site security to limit public access to the site. Without remediation of the site, additional releases to ground water, surface water and soil will continue to occur. The site was referred to EPA in 2012 from the Louisiana Department of Environmental Quality. Region 6 will echo the HQ Press announcement.

### **Proposal of Norphlet Chemical Site to the NPL (Tentative)**

**[NOTE: Has this happened?]** On August 1, EPA is scheduled to issue a letter to AR Governor Beebe proposing that the MacMillan Ring Free Oil site in Norphlet, Union County, Arkansas,

be added to the National Priorities List (NPL). The facility is bordered by a residential subdivision and the Norphlet Public School on the west, Hayes Creek on the north and east, and Massey Creek and bottomlands associated with the creek to the southwest. There are documented releases to both surface water and ground water. Sampling conducted by the EPA and ADEQ indicate that there may be as much as a foot of petroleum product underlying the facility. Without remediation of the site, additional releases to ground water, surface water and soil will continue to occur. The site was referred to EPA in 2011 from the Arkansas Department of Environmental Quality. Region 6 will echo the HQ Press announcement.
